#### 3.2.1 MONITORING DATA

Type of measurement

: other: concentration at possibly contaminated sites

Media

surface water

Concentration

ld 98-11-3 Date 12.09.2003

Method

: sequential solid-phase extraction followed by ion-pair liquid

chromatography coupled to electrospray ionisation-mass spectrometry

Method

Aliquots of coastal water from two submarine outfalls located at the river mouths of the Besos and the Llobregat near Barcelona were analysed by means of sequential solid-phase extraction followed by ion-pair liquid chromatography coupled to electrospray ionisation-mass spectrometry. Samples were taken bimonthly from March 1999 - July 2000. Nine samples

were taken in each specific point.

Result

Only in May 1999 a concentration of 1.81-5.35 ng/ml of benzenesulphonic acid was detected in Barcelona coastal waters; the other months amounts

were below the limit of detection.

Test substance Reliability 24.04.2003 : CAS 98-11-3 (benzenesulphonic acid).

activated sludge, adapted

: 200 mg/l related to COD (Chemical Oxygen Demand)

related to

Deg. product

Method

Year **GLP** 

other: not indicated

1976

Test substance

no

#### Method

## : INOCULUM

- Inoculum: 100 mg/L adapted activated sludge

- Source: sewage plant

- Preparation of inoculum: daily 200 ml is separated from the 1L solution and after sedimentation the residue (200 ml) is diluted with tap water, 600 mg/L starch or glucose, 600 mg/L peptone and 25 ml phosphate buffer pH 7.2 and the tested compound; the concentration of test substance is

gradually increased to 200 mg/L COD after 20 days

#### **TEST SYSTEM**

- Preparation of test solution: test substance is dissolved in medium

- Initial test substance concentration: 200 mg/L COD

- Culturing apparatus: beakers

- Number of culture flasks per concentration: 1 for test substance + inoculum + medium, 1 blank with inoculum and medium only

- Aeration: no

- Test duration: at least 120 h - Sampling: once or twice daily - Analytical parameter: COD

## **TEST CONDITIONS**

- Composition of mineral solution: 27.5 mg CaCl2, 22.5 mg MgSO4.7H2O,

ld 98-11-3

Date 12.09.2003

0.25 mg ferric chloride.6H2O, 50 mg ammonium sulphate, 20 ml of phosphate buffer (pH 7.2) and 100 ml tap water in distilled water - Test temperature: 20 ± 3 °C

Result

REFERENCE SUBSTANCE: 200 mg/L aniline based on COD

Percentage biodegradation corrected for blank: 98.5 based on COD.

Rate of biodegradation: 10.6 mg COD/g/h.

REFERENCE SUBSTANCE

Percentage biodegradation corrected for blank: 94.5 based on COD.

Rate of biodegradation: 19.0 mg COD/g/h.

Test substance

Reliability

CAS 98-11-3 (benzenesulphonic acid), purity not indicated. (4) not assignable

1. The information is limited to the above mentioned.

2. The study is performed with adapted sludge, which is not allowed

according to OECD guidelines.

08.07.2003

**Test substance** 

**INOCULUM/TEST ORGANISM** 

- Inoculum: 1.0 ml of 1% suspension of Niagara silt loam

**TEST SYSTEM** 

- Initial test substance concentration: 45.5 mg C/L

- Culturing apparatus: 45 mm diameter X 80 mm high screw-cap bottles

containing 40 ml of medium

- Number of culture flasks per concentration: 2 for test substance + inoculum; 2 for test substance + inoculum + HgCl2; 2 for 1% glucose

controls

- Measuring equipment: Beckman spectrophotometer

- Test duration: 64 days

- Sampling: samples were taken after mixing, at intervals of 3 to 6 hours

and at 1, 2, 4, 8, 16, 32 and 64 days after inoculation

- Analytical parameter: absorbance at 264 nm relative to soil-medium

mixture without chemical

**TEST CONDITIONS** 

- Composition of mineral solution: 1.6 g K2HPO4, 0.40 g KH2PO4, 0.50 g NH4NO3, 0.20 g MgSO4.7H2O, 25 mg CaCl2.2H2O, 2.3 mg FeCl3.6H2O

in 1 L of distilled water

- Test temperature: 25 °C

Result The time necessary for complete degradation was established to be 16

days. The degradation was due to biological activity, because no

decreased absorbance was seen in vessels with HgCl2. CAS 98-11-3 (benzenesulphonic acid), purity not indicated.

1980

**GLP** 

Test substance

Remark

Two hundred sixty of the existing chemicals listed by MITI have been tested for biodegradability; a structure-activity relationship could be

deduced for some groups.

Benzenesulphonic acid is reported to be degradable, although the presence of the sulfonic acid-group was indicated to decrease the

degradability of aromatic substances.

1999 no data

Test substance

Remark

Benzenesulphonic acid was anaerobically incubated with 10 ml of laboratory-made sludge suspension (TOC 158.6 mg/L) at 37 °C for 8 weeks. The gas volume produced was very similar to that of the blank and the test substance was classified as persistent. Benzenesulphonic acid at the concentration used (100 mgC/L) was slightly inhibitory (<=25%) to the

microorganisms used.

Benzene sulphonic acid is a persistent chemical under the anaerobic

degradation conditions as employed in this test.

## : INOCULUM

- Inoculum: 100 mg/L adapted activated sludge

- Source: sewage plant

- Preparation of inoculum: daily 200 ml is separated from the 1L solution and after sedimentation the residue (200 ml) is diluted with tap water, 600 mg/L starch or glucose, 600 mg/L peptone and 25 ml phosphate buffer pH 7.2 and the tested compound; the concentration of test substance is

gradually increased to 200 mg/L COD after 20 days

## TEST SYSTEM

- Preparation of test solution: test substance is dissolved in medium

- Initial test substance concentration: 200 mg/L COD

- Culturing apparatus: beakers

- Number of culture flasks per concentration: 1 for test substance + inoculum + medium, 1 blank with inoculum and medium only

- Aeration: no

- Test duration: at least 120 h - Sampling: once or twice daily - Analytical parameter: COD

#### **TEST CONDITIONS**

ld 104-15-4 Date 12.09.2003

- Composition of mineral solution: 27.5 mg CaCl2, 22.5 mg MgSO4.7H2O, 0.25 mg ferric chloride.6H2O, 50 mg ammonium sulphate, 20 ml of phosphate buffer (pH 7.2) and 100 ml tap water in distilled water

Test temperature: 20 ± 3 °C

REFERENCE SUBSTANCE: 200 mg/L aniline based on COD Result

Percentage biodegradation corrected for blank: 98.7 based on COD.

Method

#### : TEST ORGANISMS

- Species: Leuciscus idus f. melanotus

- Supplier: Paul Eggers, 2345 Hohenwestedt

- Size/weight/loading: 5.5-6.6 cm/1.5-2.7 g/0.75-1.35 g/L

- Feeding (pretreatment): Tetra Min

### STOCK AND TEST SOLUTION AND THEIR PREPARATION

Test substance was dissolved in medium and added to the solution in the aquarium.

#### **DILUTION WATER**

- Source: deionised tapwater

- Hardness: 114 mg CaCO3/I

- Ca/Mg ratio: 0.7 - Na/K ratio: 21

- pH (after aeration with fish): 8.0-8.2

- 02: >7 mg/L

- Conductance: <5 µS/cm

#### **TEST SYSTEM**

- Test type: static

- Concentrations: 0, 10, 100 and 500 mg/L

- Exposure vessel type: glass aquarium (40x25x30 cm) containing 20 liter

- Number of fish: 10 per replicate, 1 replicate/treatment

- Photoperiod: 12 hours (700 lux)

- Test duration: 96 hours

- Test parameter: mortality

- Observation times: regularly

- Aeration: yes

#### PHYSICAL MEASUREMENTS

- Measuring times: 0, 2, 24, 48, 72 and 96 hours for pH, dissolved oxygen and temperature

- Test temperature: 20 ± 1 °C - Dissolved oxygen: 8.5-9.2 mg/L

- pH: 7.5-8.2 (at 500 mg/L 5.7 after 2 hours and still slightly decreased after

24, 48 and 96 hours)

Result

: RESULTS

- Mortality: none

- Other effects: no difference in behaviour compared to control group;

macroscopic examination showed no changes

**Test substance** Conclusion

CAS 104-15-4 (p-toluenesulphonic acid), purity 65% in water. The LC50 >500 mg/L, which is equivalent to >325 mg/L (p-

toluenesulphonic acid is a 65% solution in water).

ld 104-15-4 Date 12.09.2003

Reliability (2) valid with restrictions

Method

: TEST ANIMALS:

- Source: Hoechst AG

- Age: male ca. 7 weeks, female ca. 8 weeks

- Number: 5/sex/dose

- Weight at study initiation: male 194-202 g; female 181-196 g

**ADMINISTRATION** 

- Route: oral (gavage)

- Doses: 1250, 1600 and 2000 mg/kg for females and 2000 mg/kg for

- Volume administered or concentration: 10 ml/kg

EXAMINATIONS: mortality and clinical symptoms several times on day 1 and daily thereafter; body weight weekly; macroscopic examination of animals found dead and sacrificed; post-exposure period was 28 days.

STATISTICAL METHOD: Probit-analysis

Result

**MORTALITY** 

- Number of deaths at each dose: 2/5, 3/5 and 4/5 at 1250, 1600 and 2000

mg/kg for females and 2/5 at 2000 mg/kg for males

- Time of death: on day 1, except for 1 animal at 1600 mg/kg died on day

13

BODY WEIGHT: decreased body weight during post-exposure period.

MAIN CLINICAL SIGNS: hypoactive, hunched posture, emaciated, irregular breathing, abnormal gait, ptosis, piloerection and bad general

condition.

**NECROPSY FINDINGS:** 

Red discolouration of the GI tract filled with blood, white discolouration of the mucosa of the stomach and intestine, pale adrenals, growing together of stomach and nearby organs, stomach haemorrhages and abdomen filled

with fluid (in animals that died spontaneously).
